FOUNDATION Fieldbus Technical Educational Forum
Thursday 22nd November

**5:00 pm (finger food) for a 5:30 start with drinks at the
conclusion sponsored by Samson Controls**

Technical Presentations
NOW SHOWING

Smart Control valves **The power to integrate into IT**

Presenter:

*Guido Koenig - Senior Manager International
Sales and Marketing, SAMSON AG Germany*

Control valves as key elements in process automation have to offer the full integration into Asset management strategies to guarantee highest availability and optimal reduced cost of ownership. With Fieldbus integration of smart control valve configuration, condition monitoring with predictive valve diagnostics and full documentation of the device history, state-of-the-art Foundation Fieldbus positioner concepts not just provide information but as well analyse and evaluate the raw data. Providing a 24/7 inline concept modern valve positioners offer precise status and predictive condition information via Fieldbus communications without the need of additional external software tools. This presentation covers and discusses these aspects.

About the Speaker - Guido Koenig has over 14 years experience in international automation markets and the control valve business. After his graduation from the Faculty of Electrical Engineering at the Dortmund University, Guido Koenig joined SAMSON in 1993 as product manager in district heating network automation. After several years as marketing manager Field networks he became technical sales manager control valves and positioners. Since 2007 he is responsible for the international sales and marketing of SAMSON for the Americas and Far East Asia / Oceania.

Location:

Melbourne Hotel, Cnr Hay and Milligan Streets Perth - Heritage Boardroom (upstairs)

Cost:

Compliments of Samson Controls Australia and the Foundation fieldbus End User Council
